

The Peptamen® Formula Difference

Evidence-based nutritional support for gastrointestinal conditions

PEPTAMEN® formulas have a **30+ year** clinical success record and over **60 studies**

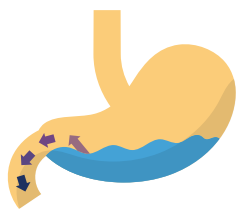

The PEPTAMEN® Formula Difference

The peptide-based formula with:

- **Enzymatically hydrolyzed 100% whey protein** to help with tube-feeding intolerance
- **Smaller, easy-to-absorb peptides**
- **A high percentage of fat as Medium-Chain Triglycerides (50-70%)**, which can be rapidly absorbed by the body and can empty quickly from the stomach and used for energy
- **A comprehensive range of peptide-based formulas** to meet different nutritional needs

From Nestlé Health Science; used by healthcare professionals for **over 30 years**, and widely studied with **more than 60 clinical studies** and proven to work.

The Peptamen® family of formulas can provide nutritional support for many types of GI conditions.

Peptamen® formulas contain enzymatically hydrolyzed, 100% whey protein, which may facilitate gastric emptying and are associated with improved absorption and tolerance.

Appropriate for patients with impaired GI function, including from:

**Malnutrition
Malabsorption
Short Bowel Syndrome
Pancreatitis**

**Inflammatory Bowel Disease
Early Enteral Feeding
Transitioning from or Dual Feeding with Parenteral Nutrition**

Available in vanilla flavor for oral or tube-fed patients

The **ONLY** peptide-based formulas with **100% whey protein**

For volume-restricted/high-caloric needs

Soluble fiber to help promote the growth of beneficial bacteria to support digestive health

Omega-3 fatty acids for modulation of inflammatory conditions

For high-protein needs
